NCAA Men's Basketball Transfer Portal Research Overview

INDIANAPOLIS
TOURISM, EVENT, AND
SPORT MANAGEMENT

The purpose of “NCAA Transfer Portal Analysis” was to research and analyze the trends within the NCAA transfer portal for basketball.

The study looked at 898 basketball players with two years of data, one year before they transferred and one year after they transferred. The research method was first to create a tier system for basketball to determine how good a team they were. The teams were separated into 6 tiers, with Tier 6 being the lowest tier and containing all non-D1 teams. The other 5 tiers were based on the data’s quartile range with Tier 1 being the outliers. Then a list of transfers fom between the 2022-2023 season and the 2023-2024 season was collected the statistics as well for the players for those two seasons.

This is the Tableau Public Story the student researchers have made in conjunction with a presentation to the NCAA. With the leadership of Dr. David Pierce, director of the IU Indianapolis Sports Innovation Institute, graduate students: Chandler Davis, Maggie Wade, Chin-Yu Wu, and Kael Ecord, have developed the key findings and visuals found in the study.

Alabama

Use this to search and browse what tier a team falls into in our tier ranking system

The factors used to create the tier system were record, conference finish, strength of schedule, non-conference strength of schedule, Quad 1 wins, tournament appearances and advancement, ranking on Ken Pom as well as ranking on Evan Mikawaya's Bayesian Performance Rating (BPR). The rankings were for the past five seasons, starting with the 2018-2019 season.
